PRODUCT AND DEVELOPMENT PARTNERSHIP

# Clash Compass

A live website and iOS companion for Clash of Clans.

Layouts, army compositions and village upgrade planning, built and maintained by an independent developer.

clashcompass.com

Prepared for an exploratory conversation. Commercial terms and ownership are open for discussion.

# What players are planning

Clash of Clans combines village progression with repeated multiplayer battles. Each decision affects what a player can build, defend with or take into the next attack.

01

## A village to develop

Buildings, heroes and research take time and resources. Players choose what to upgrade next.

02

## A base to defend

The arrangement of defenses matters. Players look for layouts suited to their Town Hall and battle type.

03

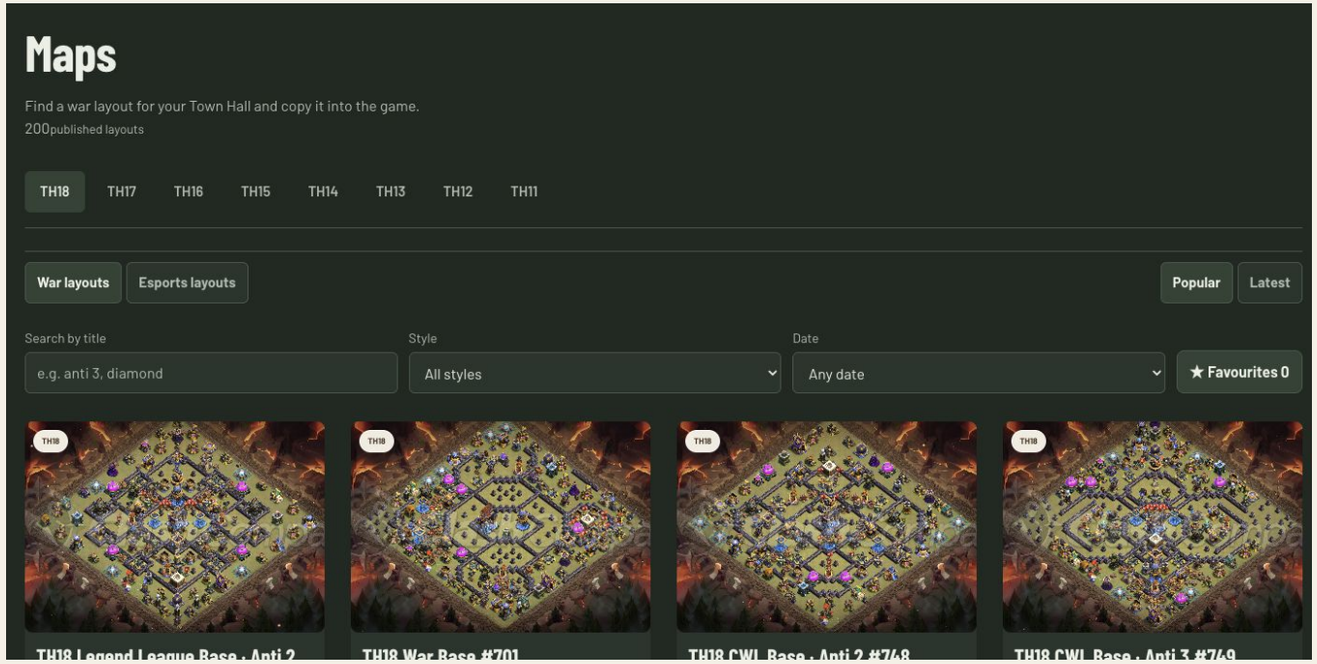

## An army to attack

Troops, spells, heroes, pets and equipment must work together, within the village's available capacity.

A companion workflow for village development, defensive layouts and battle preparation.

# Layouts and armies

Players can inspect a composition or layout, then open its published copy link in Clash of Clans.

Open the layout library

Open the army library

## Base library

Town Hall browsing, layout previews and direct in-game copy links.

## Army library

Troops, spells, siege machines and full hero loadouts, including pets and equipment.

## Competitive layouts

A separate esports collection with a paid access route in the iOS app.

Live website reviewed 5 November 2026. Published layout and army links open directly in Clash of Clans.

# A plan based on the village

A village export supplies the levels that public profile data cannot fully describe. The planner uses that state to build a practical upgrade queue.

## Dependencies before progression

Check prerequisites, required buildings and capacity before recommending the next Town Hall.

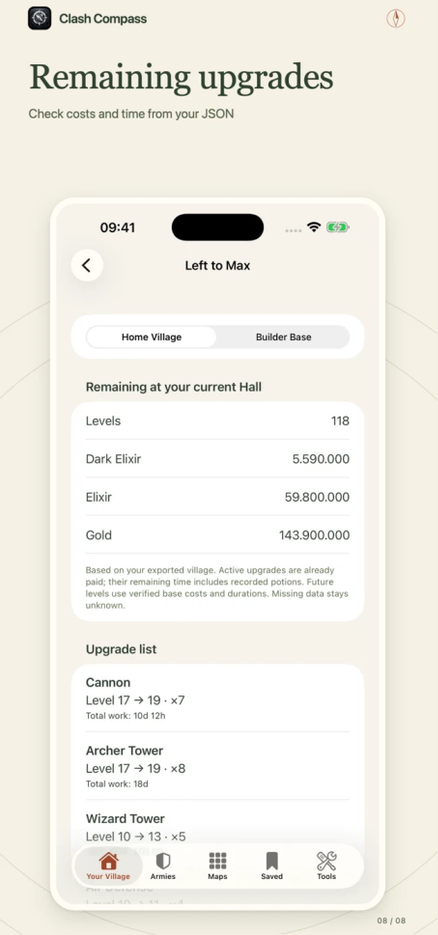

## Offense and availability

Connect priorities to the chosen army, heroes and planned league availability, alongside builder, laboratory and pet queues.

## Changing game conditions

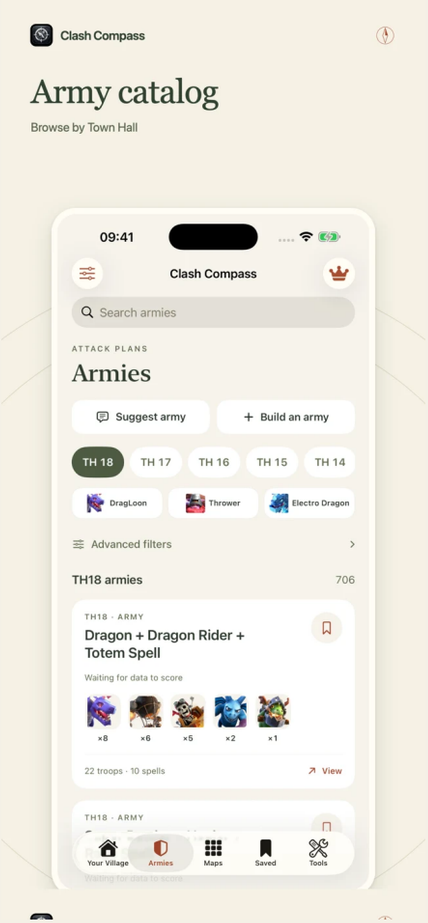

Apply supported boosts and event modifiers to costs and timers. Recalculate after a fresh village import.

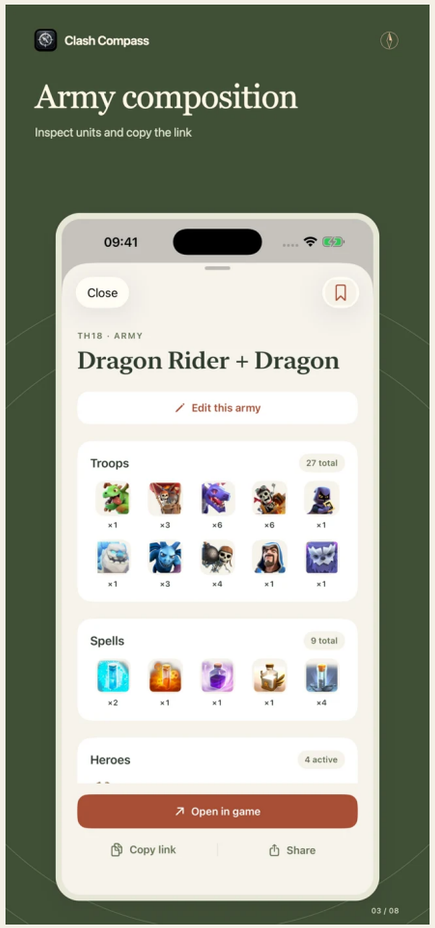

Open the upgrade planner

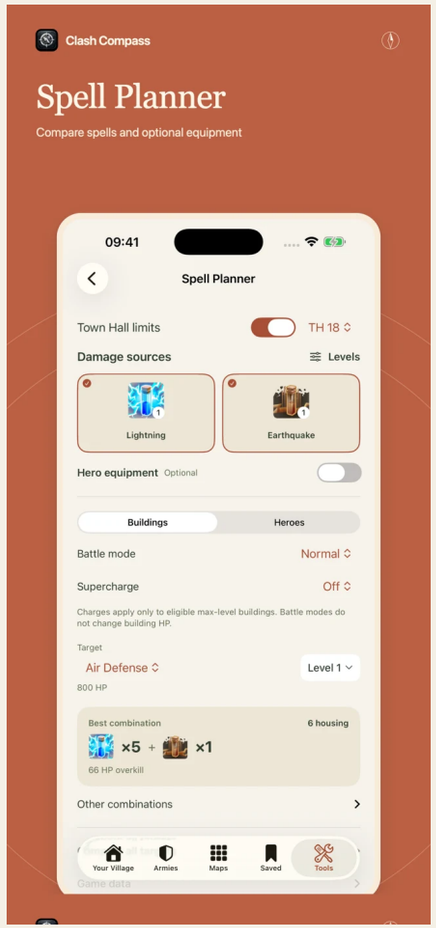

Right: English App Store artwork, 26 October 2026. The planner works from the imported village state.

# An existing iOS product

**3**

**paying subscribers**

**FIRST PAID ADOPTION**

The app is listed on the App Store. Regular layouts, army browsing and companion tools provide the free entry point; esports layout access is the initial paid content route.

# What the traffic currently shows

**14 OCTOBER - 4 NOVEMBER 2026 | UTC**

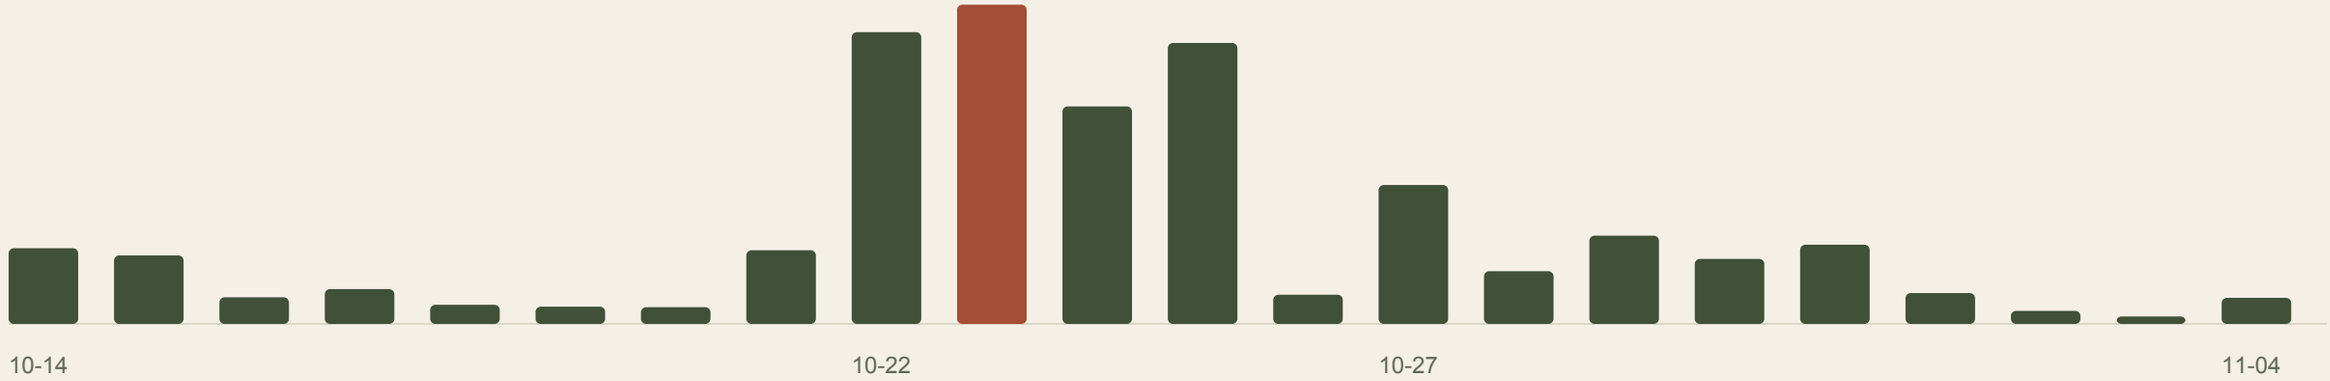

**154,079**
**Cloudflare edge page views**

**29,888**
**period unique IPs**

**258,601**
**edge HTTP requests**

**Daily edge requests**

Peak: 41,848 requests on 23 October

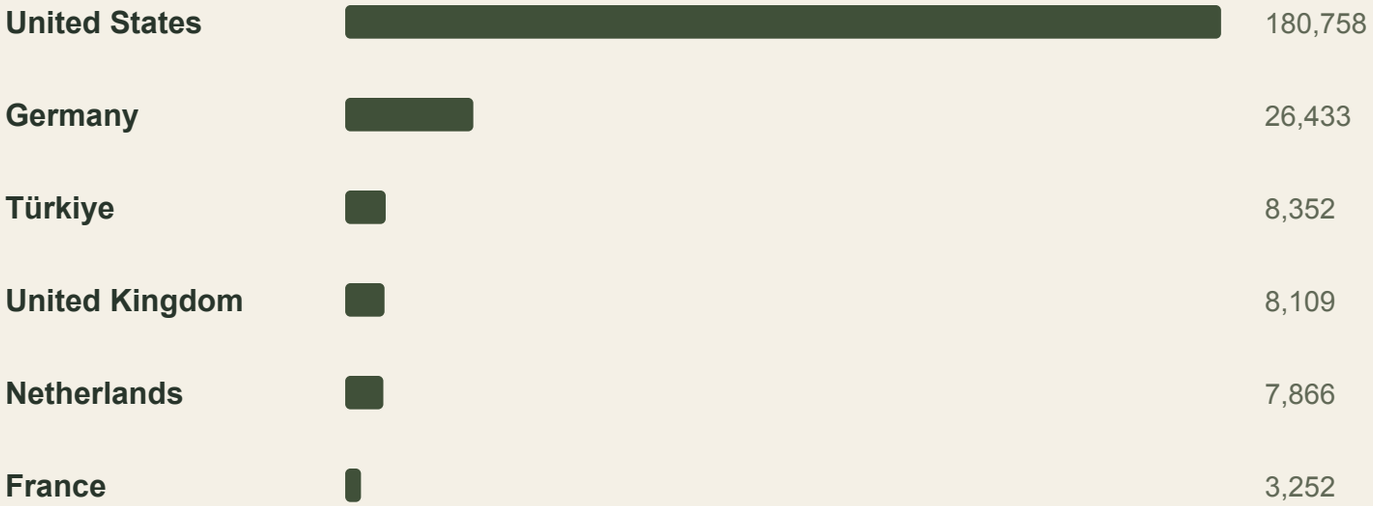

22 complete days of Cloudflare delivery data, with the daily request series shown above.

Source: Cloudflare GraphQL httpRequests1dGroups, retrieved 5 November 2026. Metric definitions are included on page 12.

# Request distribution and client analytics

The United States accounts for the largest share of Cloudflare requests. Client-side analytics adds a separate view of activity on the website.

**230**

**tracked PostHog page views**

PostHog records website page-view events from client instrumentation. The daily export accompanies the Cloudflare data in the spreadsheet.

The next measurement priorities are returning visits, army and layout copy actions, and movement from village profile to upgrade plan.

Sources: Cloudflare countryMap requests; PostHog project 670292. Daily exports and timezone definitions are included in the data pack.

# Battle data and validation

**1,165,019**
raw battle records

**37,373**
stored player profiles

**9,666**
TH18 player profiles

The research database spans multiple Town Hall levels and battle modes. TH18 contributes 286,355 raw battle records across home-village, Ranked and Legend scopes.

## Method

Compare with prior and regularized baselines using separate player, composition and future-time evaluations.

## Structured collection

Attacker-to-opponent discovery expands a persistent network. Scope and composition checks prepare training data.

VALIDATION PIPELINE

Validation separates players, compositions and future-time data, then compares calibration, ranking and predictive error against prior and regularized baselines.

TH18 Ranked report: experimental | 23 October 2026

Research snapshot: 5 November 2026. Inspected TH18 Ranked fit: 3,200 eligible matches and 468 players. Definitions and report status: page 12.

# The competitive landscape

These products already serve players well. The opportunity is to make the connection between a village, a usable army, a layout and an upgrade plan clearer.

| Product | Verified focus | Position |
| --- | --- | --- |
| **Clash Ninja** | Village import, builder/lab planning, remaining upgrades | Free upgrade tracker |
| **ClashClock** | Upgrade timers, scheduling and optional account sync | Free; donation supported |
| **Clashify** | Village, equipment, war and ZapQuake tools | Multiple companion tools |
| **ClashSpot** | Player/clan statistics, rankings and Army Maker | Statistics and army tools |
| **Clash Compass** | Layouts, full army loadouts, personalized planning and iOS | Connected product workflow |

Clash Compass connects its layout library, full army loadouts, village planning and native iOS experience within one product.

# Commercial options and partner fit

## Existing route: esports layouts

Paid esports layout access provides the first commercial route in the iOS app.

## Option to evaluate: advertising

A measured website advertising pilot can connect content demand with MOBA Network commercial and audience expertise.

## Audience and content development

Improve discovery, expand the layout catalogue and connect the website to the iOS app. Measure repeat use and content engagement throughout.

**WHY SPEAK WITH MOBA NETWORK**

MOBA's May 2026 strategy describes in-game companion apps and selected web platforms, with advertising and subscription development.

The proposed partnership combines an existing Clash of Clans product and developer continuity with product, audience and commercial support.

Proposed focus: product delivery, audience development and a measured commercial pilot.

MOBA Network strategy source: company announcement, 21 May 2026 (Nasdaq). Fan-content policy reference is included on page 12.

# A paid development partnership

I would like to continue building Clash Compass myself, with support that makes development and operation sustainable.

01

## An initial payment

Support the transition into the partnership and near-term infrastructure and product work.

02

## Ongoing monthly compensation

Retain me as the developer responsible for delivery, maintenance, game-data updates and agreed improvements.

03

## Terms agreed together

Define scope, milestones, responsibilities, ownership and any revenue participation during negotiation.

**FIRST 90 DAYS - PROPOSED SCOPE**

Days 1-30: reconcile analytics and operating costs. Days 31-60: improve the village-to-army-to-plan flow and run a measured acquisition test. Days 61-90: review repeat use, content engagement and a policy-compliant commercial pilot.

Proposed structure: an upfront payment followed by a continuing paid development role, with terms agreed together.

MOBA strategy announcement - 21 May 2026
view.news.eu.nasdaq.com/view?id=bbb976f5ed278b00d83c95f9b5191...

Cloudflare: delivery-layer page views, HTTP requests and period-deduplicated IPs. Includes automated and technical traffic. Country totals describe requests.

PostHog: 230 recorded client page-view events; days use the project timezone. Consent, blockers and instrumentation affect coverage.

Research: raw records span scopes and include rows excluded from training. The inspected TH18 Ranked report is experimental; its week begins 19 October.

Paid adoption: three subscribers is the founder conversation snapshot. Product visuals are English App Store artwork from 26 October.

Commercial policy: Supercell generally permits advertising, unconditional donations and coaching, including base layouts. Other paid functionality requires express approval.
